

# ***LSC Wireless Network Student Access***

To connect to an access point, you would need to have a computer running Windows XP, Windows Vista, Mac OS X, or a Linux distribution that you have configured to use a wireless network adaptor. The computer needs to be equipped with a wireless network card.

## **The instructions for using Microsoft Windows XP are as follows:**

1. Start the computer
2. Make sure your wireless antenna is enabled or make sure your wireless adapter card is inserted into the slot.
3. Login to your computer.
4. Click *Start>Control Panel>Network Connections*  
Locate *Wireless Network Connection* and **Right Click**  
On the menu, click *View Available Wireless Networks*
5. Locate and click on **lscpublic**.
6. Select the box - *allow me to connect to the selected wireless network, even though it is not secure* - and then click *connect*.
7. Now start your browser to access the internet.

### **Please Remember:**

The connection is for public access. You cannot access our printers from this connection. You also cannot access your student network folder (Z: drive).

### **Further Assistance:**

The Student Technology Center will provide assistance.
